Fiberstrand PPF

Virgin Homopolymer Polypropylene Fiber

DESCRIPTION

FIBERSTRAND PPF Synthetic fibers, known for their significant tensile strength and flexibility, are utilized as reinforcing materials in concrete. These fibers are produced from thermoplastic polymers, which renders them perfectly suited for concrete applications. and is specifically designed to help mitigate the formation of plastic shrinkage cracking in concrete. Typically used at a dosage rate of 0.6 - 0.9 kg/m3, FIBERSTRAND PPF has been shown to greatly reduce plastic shrinkage cracking when compared to plain concrete. Delivered in polyethylene bags, resistant to moisture and physical damage 0.6/0.9/1.0kg/bag, 18kg/carton, 6.48mt/container.

PRIMARY APPLICATIONS

- Slabs-on-grade, sidewalks, driveways, parking lots, curb work, overlays, and toppings
- Apartment, villas, factories, warehouse floors
- Footings, foundations, walls and tanks
- Stucco applications

- Precast and prestressed structures
- Shotcrete and slope paving
- Spalling control and fire protection
- Composite steel deck

FEATURES / BENEFITS

- · Controls and mitigates plastic shrinkage cracking.
- Reduces segregation, plastic settlement, and bleed water.
- Provides three-dimensional reinforcement against micro-cracking.
- Increases surface durability, impact, and abrasion resistance
- Reduction of in-place cost versus wire mesh for non-structural temperature/shrinkage crack control
- Easily added to concrete mixture at any time prior to placement.

TECHNICAL INFORMATION

The following are typical values obtained under laboratory conditions. Expect reasonable variation under field conditions.

Material Virgin homopolymer polypropylene Specific gravity 0.91 Typical dosage rates 0.6 - 0.9 kg/m3 Available lengths 6mm / 12 mm / 18 mm Diameter 20 +/- 2 µm Melting point >169 deg C Water Absorption NIL Tensile Strength ≥500 Mpa	Property	Results
Specific gravity 0.91 Typical dosage rates 0.6 - 0.9 kg/m3 Available lengths 6mm / 12 mm / 18 mm Diameter 20 +/- 2 μm Melting point >169 deg C Water Absorption NIL Tensile Strength ≥500 Mpa Variant modulus >2700 Mag	Material	Virgin homopolymer polypropylene
Typical dosage rates 0.6 - 0.9 kg/m3 Available lengths 6mm / 12 mm / 18 mm Diameter 20 +/- 2 μm Melting point >169 deg C Water Absorption NIL Tensile Strength ≥500 Mpa Vaume medicing >2700 Mpa	Specific gravity	0.91
Available lengths 6mm / 12 mm / 18 mm Diameter 20 +/- 2 µm Melting point >169 deg C Water Absorption NIL Tensile Strength ≥500 Mpa Vaume medilities >2700 Mpa	Typical dosage rates	0.6 - 0.9 kg/m3
Diameter 20 +/- 2 μm Melting point >169 deg C Water Absorption NIL Tensile Strength ≥500 Mpa Vaura machiluta >2700 Mpa	Available lengths	6mm / 12 mm / 18 mm
Melting point >169 deg C Water Absorption NIL Tensile Strength ≥500 Mpa	Diameter	20 +/- 2 μm
Water Absorption NIL Tensile Strength ≥500 Mpa	Melting point	>169 deg C
Tensile Strength ≥500 Mpa	Water Absorption	NIL
	Tensile Strength	≥500 Mpa
	Young modulus	≥3500 Mpa
Alkali resistance (40% NaOH solution Resistant	Alkali resistance (40% NaOH solution	Resistant
at 21 deg C for 1000 hrs.)	at 21 deg C for 1000 hrs.)	
Acid resistance (95% HCL solution at Resistant	Acid resistance (95% HCL solution at	Resistant
21 deg C for 1000 hrs.)	21 deg C for 1000 hrs.)	

PRECAUTIONS & LIMITATIIONS

- Use of fibers may cause an apparent loss in measured slump of concrete. This may be offset with the use of water reducing admixture if necessary.
- Fibers should never be added to a "zero-slump" concrete. Ensure a minimum concrete slump of 3" (80 mm) prior to addition of any fiber material. Fibers may also be added in loose form to aggregate charging devices.
- In all cases, consult the Safety Data Sheet before use.
